

Definiční obor

$$f(x, y) = \ln \frac{4x^2 + 9y^2 - 24x - 36y + 36}{4x^2 - y^2 - 24x + 4y + 28}$$

I) ln

$$\frac{4x^2 + 9y^2 - 24x - 36y + 36}{4x^2 - y^2 - 24x + 4y + 28} > 0$$

II) jmenovatel

$$4x^2 - y^2 - 24x + 4y + 28 \neq 0$$

čitatel: čárkovana

čárkovana

Nulové

$$(4x^2 - 24x) + (9y^2 - 36y) = -36$$

čárky

$$(4x^2 - 24x) - y^2 + 4y + 28 = 0$$

$$(4x^2 - 24x + 36) + (9y^2 - 36y + 36) = -36 + 36 + 36$$

$$4(x^2 - 6x + 9) - (y^2 - 4y + 4) + 28 - 36 + 4 = 0$$

$$(2x - 6)^2 + (3y - 6)^2 = 36$$

$$(x - 3)^2 - (y - 2)^2 = 4 \quad /:4$$

$$4(x - 3)^2 + 9(y - 2)^2 = 36 \quad /:4 \quad /:9$$

$$(x - 3)^2 - \frac{(y - 2)^2}{4} = 1$$

$$\frac{(x - 3)^2}{9} + \frac{(y - 2)^2}{4} = 1$$
